	Detail									
	Length 'mm'	n/a	n/a	n/a	n/a	n/a	n/a	300	600	2000
	Quantity	2	2	3	2	1	2	2	2	1

This special rainwater kit is designed to allow two gutters to be connected across the rear of a high eaves greenhouse up to and including 6' in width.

Below is an exploded diagram which shows all of the itemized parts and how the pipe needs to be tailored to suit your building width with a hacksaw. The '?mm' symbol means that this measurement is variable depending on your requirements.

The other side of this page shows how the parts connect together. We suggest that you use 'transparent all-weather silicone' on all of the joints to eliminate any leaks and to add rigidity.

The assembly below can be made up away from the building but you will find it easier to calculate your required measurements if you build the kit in situ joining each component together systematically.
